PROFESSIONAL SUMMARY

Computer Science and Engineering (AIML) student at Mohan Babu University with a CGPA of 8.00. Strong practical knowledge of Python, Machine Learning models and Deep Neural Networks, backed by core coursework in Artificial Intelligence, Software Engineering and Statistics. Experienced in predictive modeling, exploratory data analysis, robotics automation and interactive dashboards. Seeking an entry-level Python & AI Developer role to build intelligent software solutions.

TECHNICAL SKILLS

Programming Languages: Python (OOP, Data Structures, Scripting), SQL
AI & Machine Learning: Supervised Learning, Deep Learning (ANN, CNN basics), Model Evaluation, Hyperparameter Tuning, Scikit-Learn, TensorFlow
Data Science & Analytics: NumPy, Pandas, Matplotlib, Seaborn, Feature Engineering, Statistics & Probability, Power BI, Advanced Excel
Core Computer Science: Artificial Intelligence, Software Engineering, Database Management Systems (DBMS), Theory of Computation
Developer Tools & Environments: Git, GitHub, REST APIs, Virtual Environments, SolidWorks, DWSIM

EDUCATION

Mohan Babu University, Tirupati, Andhra Pradesh Jun 2022 – Jul 2026 (Expected)
Bachelor of Technology (B.Tech) – Computer Science and Engineering (Artificial Intelligence and Machine Learning)
- Cumulative GPA: 8.00 / 10.00 | IV-Semester SGPA: 8.41
- Key Coursework & Grades: Artificial Intelligence (A+), Software Engineering (A+), Statistics for Engineers (A+), Database Management Systems, Theory of Computation

INTERNSHIP & PRACTICAL TRAINING

Robotics & AI Intern | ROBO AI Apr 2024 – Jun 2024
- Simulated movements and AI decision-making logic for a Spot Robot prototype using Python.
- Used SolidWorks for mechanical design and hardware component integration.
- Tested autonomous locomotion and robotics kinematics in a virtual simulation environment.
- Gained hands-on training in real-time sensor processing and intelligent automation systems.

PROJECTS

Vapor-Liquid Equilibrium Prediction using Artificial Neural Network (ANN)
Tech Stack: Python, TensorFlow, Scikit-learn, Pandas, Matplotlib, DWSIM
- Designed an ANN regression model to predict ethanol–water vapor-liquid equilibrium (VLE), achieving an R^2 score of 0.9988.
- Verified model output against Raoult's Law calculations and accurately identified the azeotropic composition point.
- Cleaned and transformed experimental data and visualized thermodynamic plots using Pandas and Matplotlib.

Ride-Hailing Demand & Surge Pricing Analytics
Tech Stack: Python, Power BI, Advanced Excel
- Cleaned missing records in OLA ride-hailing datasets and preprocessed temporal features using Python (Pandas).
- Analyzed surge pricing patterns and trip statistics using Advanced Excel pivot tables and aggregation logic.
- Built an interactive Power BI dashboard to visualize booking trends, passenger demand and fleet distribution.

AI-Powered Customer Sentiment Classifier
Tech Stack: Python, Scikit-Learn, NLTK, Pandas
- Built an NLP pipeline to classify raw text into positive, negative and neutral sentiments.
- Implemented text cleaning, tokenization, lemmatization and TF-IDF feature extraction.
- Trained Logistic Regression and Naive Bayes models and optimized classification accuracy through cross-validation.

Smart IoT Environmental Cooler Controller
Tech Stack: Python, IoT Microcontroller, Sensors
- Designed an automated smart cooling system driven by temperature and humidity sensor data.
- Developed Python scripts to track real-time metrics and control relay switches and cooling thresholds.

HONORS & ACHIEVEMENTS

- **1st Place & Best Innovation Trophy:** IoT Exposition (Smart Cooler Project)
- **Academic Excellence:** Achieved perfect 10 grade points in Leadership, Innovation & Entrepreneurship and Environmental Science
